

An efficient service for any budget

Notice has a variety of media technologies that can play audio-visual footage on location. For radio, Notice has mediaplayers that can be used for Store & Forward and/or Streaming. For narrowcasting we select the most suitable mediaplayer, ranging from SD to Full HD quality, according to the program content and screen format. One mediaplayer can provide feeds for more than one screen simultaneously. There is also the option of a mediaplayer that can play both audio and video programs.

Content distribution

Programs are distributed to mediaplayers through a network system. This can be managed centrally by the distribution team at Notice or by the client. We can also program specific segments for certain groups or individual shops. The Content Management System (CMS) runs on client servers or it can be accessed through the servers at Notice via the internet (Software as a Service). For clients with systems that are not linked up to the internet Notice offers the service 'CMS for USB'.

The options

- Store & Forward Radio and TV
- Streaming Radio (with buffering)
- Smart Playlisting
- CMS for USB
- Component players: Mediaplayers linked to screens
- Full Service updates with Notice Narrowcasting
- Add your own updates with easyscreen
- Links to POS

Sustainable and affordable

All Notice mediaplayers make use of Secure Digital or Compact Flash storage which means longer life spans and lower energy consumption than a portable hard drive. The small mediaplayers can also be placed directly next to the screens. We can provide wireless mediaplayers if so desired. At Notice we go to great lengths to keep our services affordable for our clients.
